Hiago Leão Ferreira

Senior Software Engineer

hiagolof@gmail.com | +55 77 98865 5327 | linkedin.com/in/hiago-leao | Bahia, Brazil

Summary

Software Engineer with over 5 years of experience building web and mobile applications with React, TypeScript, and Node.js. Experience includes migrating a logistics ERP frontend to Svelte, building an interactive Three.js chart renderer, and developing a Supabase-backed mobile workout module. Led a fullstack team and helped define development standards, improving feature delivery speed by 4x. Background spans frontend performance, backend development, PostgreSQL, and state management with Redux and Zustand.

Experience

Senior Software Engineer
MB Labs | *Campinas, São Paulo, Brazil (remote)* *11/2022 – Present*

MB Labs is a global fintech company specialized in financial technology and the development of high-performance digital systems and applications for the financial market. Founded in 2013 as a startup, the company currently has over 300 professionals spread across Brazil, transforming complex challenges into secure, scalable solutions that deliver real impact for businesses and individuals.

• Contributed to rewriting the frontend of a logistics company's ERP system, migrating from React CLI to Svelte. The rewrite made the code easier for the team to understand, accelerated maintenance, and reduced the final application bundle size by 30%, improving initial load time. Technologies used: Svelte, React, TypeScript, HTML, and CSS.

• Built a 3D renderer to display chart details within a React administrative dashboard, enabling administrators to zoom in and out on specific points for a clearer view of individual items. Technologies used: Three.js, React, Next.js, HTML, CSS, and TypeScript.

• Developed the mobile workout creation module for a gym management app, enabling personal trainers to create and modify workouts that members could follow in the same app. This improved trainer–member interaction and increased member engagement by 40%, as measured by gym attendance reports. Technologies used: React Native, Expo, TypeScript, Supabase, Firebase, and Google OAuth.

• Acted as Lead Software Engineer for a fullstack team, guiding and supporting development and helping define development standards. This helped orient and organize the team, improving feature delivery speed by 4x. Technologies used: React, React Native, Vite, Node.js, Next.js, Prisma, PostgreSQL, MongoDB, Firebase, and GraphQL.

• Developed the frontend of a Knowledge Paths module within a course application, providing students with a visual roadmap of lessons, exercises, and materials needed to complete the course. The feature increased student engagement and boosted the number of materials consumed on the platform by 5x. Technologies used: React, Sass, Next.js, React Native, and Styled Components.

• Refactored the onboarding module of a fintech mobile application to make the user experience more intuitive and fluid. This reduced onboarding abandonment by 60% among new users, improving completion of the onboarding journey. Technologies used: React, Sass, React Native, Kotlin, and Swift.

Skills: Svelte, Three.js, React, TypeScript, Next.js, Node.js, PostgreSQL, Prisma, Supabase, Firebase, GraphQL, React Native, Expo, HTML, CSS, Google **O**Auth

---

Senior Software Engineer
Elleven Tecnologia | *Vitória da Conquista, Bahia, Brazil (remote)* *01/2022 – 10/2022*

Elleven Technology is a company focused on leading technological solutions for the transportation and mobility sector. With a united team, the company seeks to learn, foster creativity, and make a difference through intelligent and efficient systems.

• Developed a mobile application for issuing meal tickets, which streamlined the daily meal ticket issuance process for workers at the bus company Novo Horizonte. This application reduced queue time for ticket issuance from 35 to 8 minutes. Technologies used: React, Bootstrap, React Native, Node.js, and MySQL.

• Developed a commission processing and withdrawal system for ticket sales, giving Novo Horizonte ticket sellers better visibility into commissions earned from each sale and allowing them to withdraw accumulated funds. The feature encouraged better customer service and increased sales by 25%. Technologies used: React, Bootstrap, Node.js, and MySQL.

• Developed a module that allowed administrators at Novo Horizonte to manage money received via paid bank slips. This sped up reconciliation time by 10x compared to the previous process of receiving cash and counting it manually. Technologies used: React, Vite, Bootstrap, Node.js, and MySQL.

Skills: React, React Native, Next.js, TypeScript, Node.js, MySQL, Bootstrap, Vite

---

Senior Software Engineer
Federal University of Bahia (UFBA) | *Vitória da Conquista, Bahia, Brazil (remote)* *07/2021 – 01/2022*

• Developed a full-stack web application for predicting transmembrane regions in proteins, which was adopted by university researchers and students as their analysis tool. The application accelerated molecular biology research and improved research development efficiency. Technologies used: React, TypeScript, and Node.js.

Skills: React, Next.js, TypeScript, Node.js, PostgreSQL

Education

Frontend Engineering – Rocketseat, Brazil (2021 - 2022)
BSc in Biotechnology – UFBA - Federal University of Bahia, Brazil (2017 - 2022)

Courses

Android App Development using Kotlin – Udemy
Ignite React Track – Rocketseat
Complete API with AdonisJS 5, TypeScript, and TDD – Udemy
RESTful API with JavaScript, Node.js, TypeScript, Type**O**RM, etc – Udemy

Languages

English: Full professional proficiency - C1
Portuguese: Native
