Cover Letter

Dear Bask Health Hiring Team,

I'm applying for the Forward-Deployed Engineer role because Bask gives healthcare teams a way to launch and run telehealth services without building their own software. I have over five years of experience building web and mobile products, and I'm interested in bringing that experience to the workflows patients and care teams rely on.

At MB Labs, I helped migrate a logistics ERP frontend from React CLI to Svelte. I used Cursor during the migration and wrote unit tests with Jest and React Testing Library using a test-driven development workflow. The rewrite reduced the bundle size by 30% and improved initial load time. I also led a full-stack team and helped set development standards, increasing feature delivery speed by 4x.

At Elleven Tecnologia, I built a mobile meal-ticket application from scratch using React Native, Node.js, and MySQL. It reduced the time workers spent waiting for tickets from 35 minutes to eight. I also built a full-stack protein analysis tool from scratch that university researchers and students adopted for their work.

I'd welcome the opportunity to help Bask improve its React and Next.js frontend and carry features through the API and database. I'd bring hands-on experience with frontend migrations, automated testing, and building software around the workflows people use every day.

Sincerely,

Hiago Leão Ferreira
