Cover Letter

Dear iDelsoft Hiring Team,

I am applying for the Frontend Engineer - React/Redux position at iDelsoft. With over 5 years of experience developing web and mobile applications using React, React Native, and JavaScript, I bring a background in financial products, API integration, and maintainable frontend development. The opportunity to take ownership of interfaces for financial advisors aligns closely with my experience improving complex financial workflows.

At MB Labs, I refactored a fintech onboarding flow, making the experience more intuitive and reducing abandonment by 60%. I also developed a referral module that increased user acquisition by 3x and an installment payment interface that helped reduce overdue payments by 80%. These projects required translating financial processes into interfaces that made information and actions easier for users to understand.

As a Lead Software Engineer, I guided a fullstack team, helped define development standards, reviewed frontend pull requests, supported test coverage, and investigated Sentry errors. My work includes Redux for state management and Git for collaborative development. This leadership experience helped organize the team and improve feature delivery speed by 4x. I also built a Knowledge Paths module for a course platform serving more than 1,000 users, increasing material consumption by 5x.

I would welcome the opportunity to bring this combination of hands-on React development, technical ownership, and financial product experience to iDelsoft. I am based in Bahia, Brazil, and have full professional proficiency in English. Thank you for considering my application; I look forward to discussing how I can contribute to the platform's usability, reliability, and frontend architecture.

Sincerely,

Hiago Leão Ferreira
